Website SEO Audit

T26 Design Build Co. · t26designbuild.com

Prepared for	T26 Design Build Co.
Date	June 4, 2026
Scope	15 indexable HTML pages
Data source	Full-site technical crawl

6.5/10

OVERALL HEALTH

1 Executive Summary

The site has a **healthy technical foundation** — every page returns a clean **200 OK**, all pages are indexable, and canonical tags are correctly configured. There are no broken pages, redirect chains, or indexing blocks.

However, the audit surfaced several on-page and content gaps that are likely holding back rankings — especially on the high-value service pages (kitchen, bathroom, home, and landscape remodeling). The two most impactful issues are:

- **Missing H1 headings on 6 of the most important pages**, including the homepage.
- **A leftover WordPress placeholder description on the homepage** ("Just another construction site"), wasting your most valuable search snippet.

Site speed is also a concern, with several pages showing very slow server response times. The good news: the highest-impact fixes are quick and inexpensive.

2 Priority Issues — Fix First

HIGH

Homepage description is a placeholder

The homepage meta description currently reads **"Just another construction site"** — the default WordPress tagline. It appears directly in Google results and undermines credibility and click-through on your most visited page.

Fix: Replace with a compelling, keyword-rich description, e.g. *"T26 Design Build Co. delivers expert home, kitchen, bathroom & landscape remodeling in Phoenix, Scottsdale & Chandler. Book your free estimate today."*

HIGH**Missing H1 headings on 6 key pages**

These pages have no H1 tag, weakening their relevance for target keywords. They currently lead with an H2 instead.

Page	Target Keyword
Homepage	Phoenix remodeling / brand
/home-remodeling-in-phoenix/	Home remodeling Phoenix
/kitchen-remodel-phoenix/	Kitchen remodel Phoenix
/bathroom-remodel-phoenix/	Bathroom remodel Phoenix
/landscape-design-phoenix/	Landscape design Phoenix
/remodel-service/	Phoenix remodeling services

Fix: Promote the lead heading to a proper H1 containing the primary keyword (e.g. *"Kitchen Remodeling in Phoenix & Scottsdale"*).

HIGH**Homepage title is too short & under-optimized**

The title is just **"T26 Design Build"** (16 characters) — it uses almost none of the available space and contains no service or location keywords.

Fix: *"Phoenix Home Remodeling & Design Build Contractor | T26"* (~50–55 characters).

3 Medium-Priority Issues

MEDIUM

Meta descriptions too long (truncated in search)

Six pages exceed the ~160-character limit and get cut off in search results:

Page	Length (chars)
/remodel-service/	341
/contact-us/	323
/kitchen-remodel-phoenix/	307
/landscape-design-phoenix/	291
/about-us/	269
/our-work/	259

Fix: Trim each to a single, tight sentence with a call to action. The bathroom & home-remodeling pages are already a good length — use them as the template.

MEDIUM

Thin content on portfolio pages

The six project pages (Grand Vista Duplex, Cedar Cabin, Chandler Home Remodel, etc.) contain only **52–68 words each** — essentially image galleries with little text for Google to rank.

Fix: Add 150–250 words per project covering scope of work, location, materials, and outcome. This also strengthens local relevance ("Chandler", "Scottsdale", etc.).

MEDIUM**Slow server response times**

Several pages are slow to respond (Time to First Byte). Anything over ~1 second is a problem — these are well beyond that.

Page	Response Time
/contact-us/	12.98 s
/landscape-design-phoenix/	10.81 s
/about-us/	7.79 s
Homepage	6.76 s

Fix: Investigate hosting, caching, and unoptimized plugins/images. Slow load times hurt both rankings and conversions.

4 Low-Priority & Housekeeping

- [REDACTED] The "Our Work" page reads "home and **ourdoor** remodeling projects" — should be "outdoor". Worth a full-site proofread.
- [REDACTED] The Scottsdale Kitchen Remodel page has only **1 internal link**. Link portfolio pages from related service pages to spread authority.
- [REDACTED] Several service pages score "Fairly Hard". Shorten sentences and break up paragraphs.
- [REDACTED] Site is served over HTTP/1.1. Upgrading to HTTP/2 (a host/CDN setting) gives a small speed gain.

5 What's Working Well

- All 15 pages return **200 OK** and are **indexable** — no crawl or indexation errors.
- **Canonical tags** are present and self-referencing on every page.
- Clean, **keyword-friendly URLs** (e.g. /kitchen-remodel-phoenix/).
- Logical architecture — **crawl depth never exceeds 2 clicks**.
- Most service-page titles are well-formed and include location keywords.

6 Recommended Action Plan

#	Action	Priority	Effort
1	Replace homepage placeholder description		Low
2	Add H1 tags to the 6 affected pages		Low
3	Rewrite & lengthen homepage title tag		Low
4	Trim 6 over-length meta descriptions		Low
5	Expand thin portfolio-page content		Medium
6	Reduce server response times		Medium
7	Fix typos & improve internal links		Low

Quick wins: Items 1–4 can be completed in just a few hours and address the highest-impact issues on the site.

Audit based on a full-site technical crawl. For a complete picture, pair this with Google Search Console (queries & clicks), Google Analytics (conversions), and a backlink profile review.
