

SEO AUDIT REPORT

COOLBEAR Heating & Air LLC

Google Business Profile • Local SEO • On-Page SEO

Website: coolbearservices.com | Phone on GBP: (512) 915-0440

Market: Round Rock / Georgetown / Williamson County, TX

Report date: September 28, 2026

Prepared by: Outwork'em Digital

1. Executive Summary

COOLBEAR Heating & Air has a verified Google Business Profile with a perfect 5.0 rating, which is a good starting point. The problem is that almost everything around that profile is working against it. The business appears online under **at least four different names, two phone numbers, three websites and more than one address**. Google uses consistency to decide how much it trusts a local business, so this fragmentation is very likely the single biggest reason the profile is not ranking in the Map Pack.

The bottom line: Before spending on content or links, COOLBEAR needs to pick one name, one phone number, one website and one address, then make every listing on the internet match. Once that is fixed, reviews and GBP activity will start to move rankings. Without it, most other work will be wasted.

Scorecard

Area	Score	Status	Key finding
Google Business Profile	3 / 10	Critical	Verified, but no photos, only 3 reviews, Google flags missing information.
Reviews & reputation	2 / 10	Critical	3 Google reviews vs. local competitors with years of reviews. Reviews also split across duplicate Yelp listings.
NAP consistency (Name, Address, Phone)	2 / 10	Critical	4+ business names, 2 phone numbers, 2 cities and 3 domains found across the web.
Citations & directories	3 / 10	High	Listed on Yelp and BBB, but with duplicates and conflicting data. Most key directories not found.
Website indexing & brand signals	2 / 10	Critical	coolbearservices.com returned no pages in a site: search. A Florida company named "Cool Bear Services LLC" competes for the same brand name.
Website foundation	2 / 10	Critical	Site is likely hard for Google to read: single page, generic copy, missing SEO basics (Section 6).
Real images	1 / 10	Critical	No photos on GBP; site likely uses stock or AI images. Real team, truck and job photos needed (Section 8).
On-page SEO (website content)	N/A	Not verified	Site could not be crawled for this report. Checklist provided (Sections 5 and 7).

Top priorities

- **Choose one official brand identity** (recommended: "COOLBEAR Heating & Air") and one phone number, and use it everywhere.
- **Consolidate the three websites into one** and 301-redirect the others to it, page by page.
- **Fix the website SEO foundation** so Google can actually read and index it: separate pages, unique titles, real links, real content and real photos.
- **Finish the Google Business Profile:** photos, logo, secondary categories, services, description, service areas and weekly posts, plus a review request after every job (target 25+ new reviews).

2. Google Business Profile Audit

Based on the live profile as it appears in Google Maps (screenshot provided, September 2026).

Element	What we see	Status	Recommendation
Business name	COOLBEAR Heating & Air LLC	Weak	Name is fine and has no keyword stuffing, but it does not match most other listings (see Section 3). Keep one version everywhere. "LLC" is optional; if kept, keep it on every listing.
Primary category	Air conditioning contractor	Pass	Correct choice for an AC-led HVAC business in Central Texas.
Secondary categories	Not visible	Verify	Add: HVAC contractor, Heating contractor, Air conditioning repair service, Furnace repair service, Air duct cleaning service (only services actually offered).
Photos / logo / cover	None. Google shows its default city illustration.	Fail	Upload logo, cover photo, and 20+ real photos: team, trucks, installs, before/after. Add 3 to 5 new photos every week.
Reviews	5.0 rating, 3 reviews	Fail	Rating is great, volume is far too low to compete. Build a review request process (Section 4).
Address / service area	No address shown (service-area business)	Pass	Correct if working from home. Confirm service areas are set: Round Rock, Georgetown, Pflugerville, Hutto, Cedar Park, Leander, Taylor, Liberty Hill, north Austin.
Hours	Open, closes 5 pm	Weak	Mon to Fri 8 to 5 misses evening and weekend AC emergencies, which are high-value Texas searches. Add extended or emergency hours if the team can answer the phone.
Phone	(512) 915-0440	Weak	A second number, (512) 550-5010, is used on Yelp and other sites. Pick one primary number.
Website link	coolbearservices.com	Weak	Link points to a domain that is not showing in Google search. Add UTM tracking (?utm_source=google&utm_medium=gbp) so GBP leads can be measured.
Profile completeness	"Add missing information" prompt shown	Fail	Google itself is flagging the profile as incomplete. Fill every field: description, opening date, services, attributes (e.g. online estimates, Spanish spoken, veteran/family-owned if true).
Business description	Not visible in overview	Verify	Write a 700 to 750 character description covering services, cities served, years of experience, TDLR license and Spanish-speaking service.
Services & products	Not visible	Verify	List every service with a short description: AC repair, AC replacement, heating repair, heat pumps, maintenance plans, commercial HVAC, emergency AC repair.
Posts & Q&A	None visible	Verify	Publish 1 post per week (seasonal offers, recent jobs, tips) and seed 5 to 10 common questions with answers (financing, cities served, emergency service).

3. Local SEO Audit: NAP Consistency & Citations

NAP stands for Name, Address, Phone. Google compares this information across the web to confirm a business is real and where it operates. Mismatches lower trust and rankings. This is what we found:

Source	Business name used	Phone	Location	Website
Google Business Profile	COOLBEAR Heating & Air LLC	(512) 915-0440	Service area (hidden)	coolbearservices.com
Yelp (listing 1)	COOLBEAR HEATING & AIR	(512) 550-5010	Georgetown, TX 78633	Verify
Yelp (listing 2)	Cool Bear AC	Verify	Round Rock, TX	Verify
Yelp (listing 3)	COOLBEAR HEATING & AIR	Verify	Georgetown / Round Rock	Verify
BBB	Cool Bear AC	(512) 915-0440	506 Side Cove, Round Rock, TX 78680	Verify
Website 2	Cool Bear Heating and Air	(512) 550-5010	Georgetown, TX	coolbear.tx.com
Website 3	Cool Bear AC	(512) 550-5010	Round Rock, TX	coolbearheatingandair.com

"Verify" = the field could not be confirmed from search results and should be checked on the live listing.

Issues found

- **4 name variations:** COOLBEAR Heating & Air LLC, COOLBEAR HEATING & AIR, Cool Bear Heating and Air, Cool Bear AC. Google may treat these as different businesses.
- **2 phone numbers:** (512) 915-0440 on GBP and BBB; (512) 550-5010 on Yelp and both older websites.
- **2 cities:** listings say Georgetown (78633) in some places and Round Rock (78680) in others. Note: 78680 appears to be a Round Rock PO Box ZIP, which Google does not accept as a business address.
- **3 duplicate Yelp listings:** splits reviews and confuses Google. Request Yelp merge them into one.
- **Founding date conflict:** one source says established 2015, BBB says the business started March 2018. Pick the accurate one and use it everywhere.
- **Brand collision:** "Cool Bear Services LLC" is a large, unrelated HVAC company in Delray Beach, Florida with BBB, LinkedIn and ZoomInfo profiles. The domain coolbearservices.com closely matches their name, which can confuse Google about which entity the website belongs to.

Recommended official NAP (to confirm with the client)

Name: COOLBEAR Heating & Air LLC

Phone: (512) 915-0440 (matches GBP and BBB)

Address: Hidden service-area business, based in Round Rock, TX (no PO Box)

Website: one chosen domain (see Section 5)

Citation checklist

Directory	Status	Action
Google Business Profile	Pass	Complete all fields (Section 2).
Yelp	Fail	Claim all 3 listings, request merge, update NAP.
BBB	Weak	Update name, add website, consider accreditation.
Bing Places for Business	Verify	Claim and import from GBP.
Apple Business Connect (Apple Maps)	Verify	Claim and match NAP. Important for iPhone users and Siri.
Facebook Business Page	Verify	No matching page found in search. Create or update with exact NAP.
Nextdoor Business	Verify	Not found. High value for home services in Round Rock and Georgetown neighborhoods.
Angi / HomeAdvisor / Thumbtack	Verify	Not found. Create free profiles with consistent NAP.
Yellow Pages, Manta, BuildZoom, Houzz	Verify	Create or claim and match NAP.
Round Rock & Georgetown Chambers of Commerce	Verify	Membership gives a trusted local link and citation.
Data aggregators (Data Axle, Foursquare, Neustar Localeze)	Verify	Submit once; these feed hundreds of smaller directories.

4. Reviews & Reputation

Reviews are one of the top three factors for ranking in the Google Map Pack, and the first thing homeowners look at when choosing an HVAC company. With 3 reviews, COOLBEAR is effectively invisible next to established Georgetown and Round Rock competitors that have built reviews over many years.

How to fix it

- **Ask every customer, every job.** Technician asks in person, then an automatic text and email with the direct Google review link go out within 2 hours of job completion.
- **Follow up once** after 3 days if no review is left.
- **Reply to every review within 48 hours**, positive or negative, and naturally mention the service and city (e.g. "Glad we could get your AC running again in Round Rock").
- **Encourage detail:** ask customers to mention what was done. Reviews with service keywords help rankings.
- **Never** buy reviews, offer incentives for reviews, or filter only happy customers. These break Google policy and can get the profile suspended.

5. Website & On-Page SEO Audit

Important limitation: coolbearservices.com could not be loaded by our audit tools at the time of this report, so page-level items (titles, headings, content, speed) are listed as a checklist to confirm rather than as verified results. The findings below that are marked as confirmed come from Google search data.

Confirmed findings

- **The website linked from GBP is not showing in Google.** A site:coolbearservices.com search returned no pages from the domain. If the site is not indexed, the GBP has no website authority supporting it. Check Google Search Console right away.
- **Three separate websites exist** for the same business: coolbearservices.com, coolbear.tx.com and coolbearheatingandair.com. The two older sites are indexed and use different names and a different phone number. This splits authority three ways and sends mixed signals.
- **Older sites use generic titles** such as "Contact Us | Georgetown, TX | Cool Bear Heating and Air" and one says Round Rock while another says Georgetown for the same business.

Recommendation: one website

Choose one domain as the official site. If coolbearservices.com is staying (it matches the GBP), 301-redirect every page on coolbear.tx.com and coolbearheatingandair.com to the matching page on coolbearservices.com, not just to the homepage. Then update every listing to point at the one domain. Because the older domains are already indexed, they may carry more history; if the client has no strong reason to keep coolbearservices.com, consolidating onto the older domain is worth considering.

On-page checklist (to confirm on the live site)

Item	What good looks like	Priority
Indexing	Site verified in Google Search Console, sitemap submitted, key pages indexed.	Critical
Homepage title tag	AC Repair & HVAC Services in Round Rock, TX COOLBEAR Heating & Air (under 60 characters).	High
Homepage H1	One clear H1, e.g. "Round Rock & Georgetown AC Repair and HVAC Services".	High
Meta descriptions	Unique per page, 140 to 155 characters, with city, service and a call to action.	Medium
NAP in footer	Exact official name and phone on every page, matching the GBP.	Critical
Click-to-call	Phone number clickable on mobile, visible in the header.	High
Service pages	One page per service: AC repair, AC replacement, heating repair, heat pumps, maintenance plans, commercial HVAC, emergency AC repair.	High
City pages	Unique pages for Round Rock, Georgetown, Pflugerville, Hutto, Cedar Park, Leander. Real local content, not copy-paste.	High
TDLR license number	Texas ACR license number shown in footer and on contact page (required on advertising in Texas).	High
Local business schema	HVACBusiness schema with name, phone, service area and URL matching GBP.	Medium

6. Why the Website Is Not Ranking

The website looks good to visitors, but a site can look great and still be missing the basics Google needs to read, trust and rank a local business. Since the site is not showing up in Google at all, several of the issues below are very likely present.

Quick 2-minute test anyone can do: open the site, right-click, choose "View Page Source" and search for "AC repair". If you cannot find the service text in that code, Google may be seeing a nearly blank page. Also search Google for **site:coolbearservices.com**. No results means Google has not indexed the site.

Ranking factor	What to look for	Status	Fix
Google can read the page	Content is loaded by JavaScript after the page opens. Google often sees an empty shell and nothing to rank.	Likely issue	Turn on pre-rendering or server-side rendering, or rebuild key pages on WordPress or a static site.
Site is indexed	Never submitted to Google, or a leftover "noindex" tag from development blocks it.	Likely issue	Verify in Google Search Console, remove any noindex, request indexing.
Sitemap & robots.txt	Missing, empty, or listing the wrong pages.	Verify	Create sitemap.xml with every real page and a clean robots.txt.
Separate pages	Everything is on one long page. One page cannot rank for AC repair, heating, installation and six cities at once.	Likely issue	Create a real page (own URL) for every service and every city.
Titles & descriptions	Same title on every page, or a default placeholder title.	Likely issue	Unique title and meta description on every page with service + city.
Headings	Several H1s, or none. Headings used for design, not structure.	Verify	One H1 per page, then H2s for each section.
Real links	Menu items are buttons that run code instead of real links, so Google cannot follow them to other pages.	Verify	Use normal HTML links for navigation and internal links.
Duplicate preview site	A copy of the site lives on a hosting or preview address and gets indexed as duplicate content.	Verify	Noindex or redirect the preview domain; set canonical tags to coolbearservices.com.
Content quality	Generic copy that could be for any HVAC company in any city. No local detail, no real experience.	Likely issue	Rewrite with real details: team, years, cities, brands serviced, real jobs, Upcycling Program.
Images	AI-generated or stock photos. No real team, trucks or jobs.	Likely issue	Replace with real photos (Section 8).
Business details	Phone, license and service area missing or only in an image.	Verify	NAP and TDLR license number as text in the footer of every page.
Schema (business data for Google)	Not added by default.	Likely issue	Add HVACBusiness schema matching the GBP.
Mobile speed	Heavy code and large images make the site slow on phones.	Verify	Compress images, test in PageSpeed Insights, aim for under 3 seconds.
Link preview & favicon	Default icon and share image, so texts and Facebook posts show the wrong brand.	Verify	Add COOLBEAR favicon and a branded share image.
Forms & tracking	Contact form looks fine but does not send, and no analytics is installed.	Verify	Test the form end to end; install Google Analytics and call tracking.

7. Main Missing Elements to Add

These are the elements a local HVAC website needs to rank and to turn visitors into calls. Every item below should be checked on the site and added if missing.

Area	Element to add	Why it matters
Header	Logo, click-to-call phone number, "Schedule Service" button	Most HVAC leads are phone calls from mobile. The number must be one tap away.
Header	Main menu: Services, Service Areas, About, Reviews, Contact	Helps Google and visitors find every page.
Homepage	H1 with main service + city (e.g. Round Rock & Georgetown AC Repair)	Tells Google what the business does and where.
Homepage	Short list of services linking to each service page	Passes authority to service pages.
Homepage	Google reviews section with real names	Builds trust and matches the GBP rating.
Homepage	Service area section linking to each city page	Local relevance for every city served.
Service pages	AC repair, AC installation/replacement, heating repair, heat pumps, maintenance plans, commercial HVAC, emergency AC repair	Each service needs its own page to rank for its own searches.
City pages	Round Rock, Georgetown, Pflugerville, Hutto, Cedar Park, Leander	Ranks the business in each city it serves. Each page needs unique local content.
About page	Owner story, team photos, years in business, family-owned, TDLR license	Real people and experience are what Google and homeowners trust.
Reviews page	Full list of reviews plus a "Leave us a review" link	Supports review growth on the GBP.
Contact page	Full NAP as text, embedded Google Map, working form, hours	Confirms the business location and details to Google.
Footer	Name, phone, service area, hours, license number, social links on every page	Consistent NAP site-wide.
Trust signals	Satisfaction guarantee, financing options, brands serviced, BBB badge	Increases calls from visitors.
Offers	Seasonal AC tune-up special, maintenance plan	Reason to call now; great for GBP posts too.
FAQ section	Common questions (cost, emergency service, cities served)	Helps with Google and AI search answers.
Unique story	Cool Bear Upcycling Program page	Nobody else has it. Earns local press and links.
Spanish page	Spanish-language landing page	The business offers Spanish service; few competitors target it.
Legal	Privacy policy and terms pages	Expected on legitimate business sites and needed for ads and forms.

8. Real Images: A Must-Have

The site needs real photos in place of stock or AI-generated images. For a local service business this is a real problem. Homeowners are letting a technician into their home, and they want to see the real people and trucks. Stock and AI images also appear on thousands of other sites, so they give Google no signal about this business.

Why real photos help rankings and calls

- **Trust:** real team and truck photos get more calls than stock images.
- **Consistency:** the same real photos on the website and GBP connect the two in Google's eyes.
- **Uniqueness:** original images can rank in Google Images; stock images cannot.
- **Credibility:** AI-generated people look fake to many visitors and hurt conversions.

Photo shot list

Photo	Where to use it
Owner and full team in uniform	Homepage, About page, GBP
Technicians working on real AC units	Service pages, GBP
Branded service trucks with logo	Homepage, Contact page, GBP
Before and after of new AC installs	AC installation page, GBP posts
Outdoor units installed at local homes	City pages (Round Rock, Georgetown, etc.)
Thermostat and indoor unit installs	Service pages
Commercial rooftop jobs	Commercial HVAC page
Upcycling Program donations to local families	Upcycling page, GBP, social media

Image setup on the website

- **File names:** describe the photo, e.g. *ac-installation-round-rock-tx.jpg*, not *IMG_4521.jpg* or *image-generated-1.png*.
- **Alt text:** short description with service and city, e.g. "COOLBEAR technician repairing AC in Georgetown TX".
- **Size:** compress to WebP, under 200 KB each, so the site stays fast on phones.
- **Remove** all AI-generated people and stock photos once real photos are available.

9. Local Competitor Snapshot

These companies appear most often in search results and top-rated lists for AC and HVAC services in Georgetown and Round Rock. They are the businesses COOLBEAR must outrank in the Map Pack.

Competitor	Website	Why they rank
DTC Air Conditioning & Heating	dtctexas.com	33+ years in Georgetown, strong brand and review history.
Georgetown Air Conditioning & Heating	georgetownac.com	City name in brand, dedicated reviews page.
1431-183 A/C & Heating Repair	1431ac.com	Targets Round Rock, Georgetown and Cedar Park directly in titles.
Texas Bree	texasbree.com	Dedicated Georgetown city page.
Belk HVAC, Roger Stuth A/C, McCullough, Rembert's	Various	Frequently listed as top-rated on Yelp, Angi and HomeAdvisor.

What COOLBEAR can win on: a perfect 5.0 rating, family-owned story, 20+ years of combined tech experience, Spanish-speaking service, and the Upcycling Program. Competitors cannot copy these. Put them on the GBP, the website and in review replies.
